

Findings from the visualization:

The histogram shows the distribution of temperatures across the year, broken down by month as shown by the fill in each bin.

The temperatures range from -6.7°C to 27.4°C . The lowest temperatures occur from Dec to Feb, which typically means that it is the winter season. The highest temperatures occur from Jun to Sep, which means that it is the summer season.

Based on this seasonal pattern, we can infer that the location is in the Northern Hemisphere. Moreover, in summer the temperature is mild and moderate, but in winter the temperature sometimes drops below zero degrees, which gives a freezing feeling.
